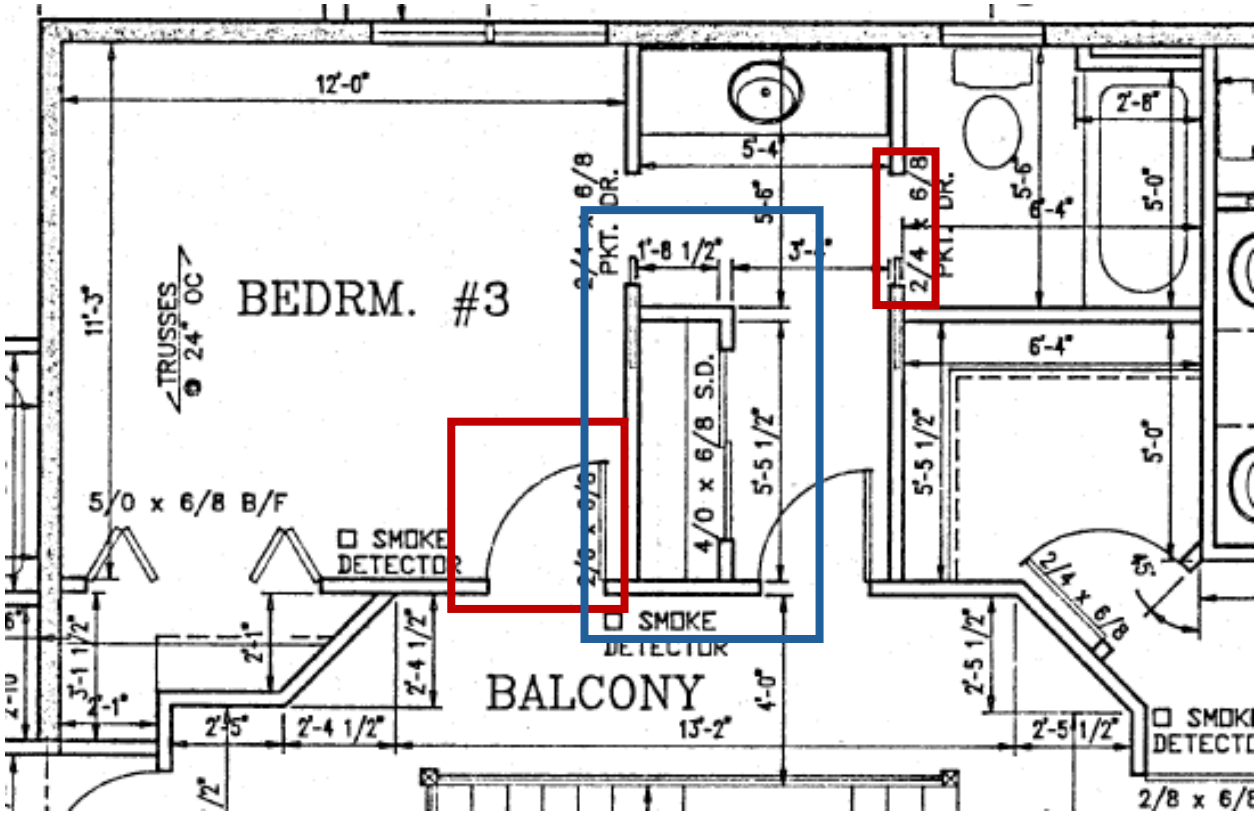
2 Stable Ln Second Floor Configuration Notes

The second floor bedroom was originally designed and built per the plans below. Around 2010, the bedroom and bathroom were combined to provide the teenage daughter with more space.

Shown in Red – The original hall door and transom window were retained for future use – the transom window is in the basement and the hall door in now installed to isolate the toilet and shower.


Shown in Blue – The linen closet and bedroom wall were removed with no structural changes to the home. This wall, built-in closet, and flooring reconfiguration could be easily accomplished, along with installing new pocket doors on either side of the isnk.
